Assignment 5 -- HTML

Create, test, and validate an HTML document that replicates the image shown on the next page:

- The images that you are required to use can be found on Blackboard
- There is NO CSS used for this assignment. DO NOT use CSS.
- DO NOT implement a table to obtain the full page required layout. (You may need to use a table for portions of the page)

- Add markup and content, making best guesses as to what HTML markup to use. Below are a few examples with additional information. Note: **THIS IS A REQUIREMENT**.

> <header>
> <footer>
> <article>
> <section>
> <nav>
> <figure>
> <figcaption>

i. The `header` element typically contains the headings for a section (an h1–h6 element or `hgroup` element), along with content such as introductory material or navigational aids for the section.

ii. Not all groups of links on a page need to be in a `nav` element—the element is primarily intended for sections that consist of major navigation blocks. In particular, it is common for footers to have a short list of links to various pages of a site, such as the terms of service, the home page, and a copyright page. The `footer` element alone is sufficient for such cases; while a `nav` element can be used in such cases, it is usually unnecessary.

iii. The `article` element represents a section of content that forms an independent part of a document or site; for example, a magazine or newspaper article, or a blog entry. The `section` element represents a section of a document, typically with a title or heading.

iv. The `section` element represents a generic section of a document or application. A `section`, in this context, is a thematic grouping of content, typically with a heading. Examples of sections would be chapters, the various tabbed pages in a tabbed dialog box, or the numbered sections of a thesis. A Website's home page could be split into sections for an introduction, news items, and contact information.

v. The `article` element represents a self-contained composition in a document, page, application, or site and that is, in principle, independently distributable or reusable, e.g. in syndication. This could be a forum post, a magazine or newspaper article, a blog entry, a user-submitted comment, an interactive widget or gadget, or any other independent item of content.

vi. The `figure` element represents some flow content, optionally with a caption, that is self-contained and is typically referenced as a single unit from the main flow of the document. The element can thus be used to annotate illustrations, diagrams, photos, code listings, etc, that are referred to from the main content of the document, but that could, without affecting the flow of the document, be moved away from that primary content, e.g. to the side of the page, to dedicated pages, or to an appendix.

Follow the instructions for submission that have been posted.

Note the accent on the e character in Rivière.

Link to larger version. Also, don't forget `alt` and `title` attributes.

For the reviews you can use Lorem ipsum for the text. You don't have to have actual reviews.

All links can just be to "#"

Mademoiselle Caroline Rivière

by Jean-Auguste-Dominique Ingres

The portrait of Mademoiselle Caroline Rivière was painted in 1806 by the French Neoclassical artist Jean Auguste Dominique Ingres, and today hangs in the Louvre. It is the third of three portraits of the Rivière family the artist painted that year.
